### Highway Assessment Surveys and Systems

Suitable for data from all legacy systems (T-Road, Roadster, exor, SBS, Hermis), I-Browse provides a simple and easy-to-use solution for viewing and reporting on Inspection and Defect history. If uncompleted defects and works orders have been transferred, a completion of work option is available to close these items as their completion dates become known. The production of essential reports, particularly for dealing with Claims, is straight-forward.

- User control and login
- Network and Route Viewers
- Inspection and Defect Viewers
- Works Order Viewer
- Exports all Data to CSV files
- Includes Street Works Inspection records where recorded
- Simple completion of Works and Defects (optional)
- Brief and Full Insurance Reports
- Performance against Target Reports
- Defect Cost Report
- Self-installing and easy-to-use

As well as I-Browse the data browser, we also have an expanded version which is a full and complete text-based management system. Additionally the same functionality is available in GeoMaintenance Manager which is fully map-enabled (see separate brochure).
