

TDS Recon

Customize your TDS Recon. Get the job done.

Whether you need to collect data, upload site photos, communicate with the office, map a specific location or scan bar codes in the field, you can configure the Recon™ rugged handheld computer from Tripod Data Systems (TDS) to accomplish your specific tasks. With the Recon's many accessories, you'll experience increased productivity in the field without sacrificing the rugged performance you've come to expect.

The handheld that wears many caps

The Recon is shipped with a Standard CF-Cap™ that fits small CompactFlash (CF) memory and Bluetooth cards. For the larger CF cards, you can choose from three different accessory caps for your Recon. The caps, made of ruggedized nylon, protect the cards as well as the Recon's CF slots and internal components from contamination by dirt, dust and water.

The Extended CF-Cap™ is designed to protect larger cards, such as GPS cards. The Recon Optical CF-Cap™ contains a transparent window that allows you to use the camera or a bar code imager card, while at the same time keeping the CF slots well protected. The Midsize CF-Cap™ can be used with smaller cards such as an 802.11b wireless LAN or a GPRS card.

It's in the cards

TDS offers a variety of CF cards for use with the Recon. From GPS to Bluetooth, from reading bar codes to taking pictures, CF cards maximize the capability of your Recon, taking it far beyond standard data collection.

With a Bluetooth card, you can add short-range wireless capabilities to your Recon. Install a scan card in your Recon and collect bar code data in the field. Need GPS capabilities? The Recon has you covered there too—just pop in a GPS card, and you'll be able to map even remote locations.

And when data alone just isn't enough, you can add LifeView's FlyCAM-CF camera card to take photos with your Recon.

The power to get the job done

The standard Recon PowerBoot Module™ is a rechargeable NiMH battery pack that provides an incredible 3800 mAh of battery power for an average of 15 hours of continuous operation. You can recharge it overnight at home or at the office. Or, there's a convenient vehicle charger you can use en route to the job.

If you don't have time to recharge or simply prefer the ease of AA batteries, opt for the AA PowerBoot Module™, a battery pack that holds two standard AA batteries.

State your case

TDS offers two styles of carrying cases for your Recon, with models that fit both Standard and Extended CF-Caps. The deluxe carry case offers extra protection and comes with a belt clip, a neck strap and a screen flap that allows you to work with the Recon while the unit is still in the case. The nylon case comes with belt strap so you can carry the Recon wherever you go.

More accessories

TDS continues to design new accessories and add to the list of compatible CF cards—all to ensure that the Recon can be configured to meet your every need in the field. For a current list of Recon accessories, visit the TDS Web site (www.tdsway.com/reconacc).

Handhelds for the Working World™

TDS RECON ACCESSORIES

COMPACTFLASH CARDS

Audiovox RTM-8000 GSM/GPRS

- Wireless WAN
- 900/1800/1900 MHz

Holux GM-270 GPS

- 2–5 meter accuracy
- Internal antenna
- WAAS enabled
