By being truly independent, John Reid Consultancy Services Ltd offers you a practical solution to your Highway Asset Management needs by providing services and advice related to your existing situation or alternately offers a complete and full alternative at a competitive cost.

30 years experience of highway assessment system and surveys

STRUCTURAL MAINTENANCE

John Reid has worked with highway assessment surveys and systems for over 30 years. Starting with CHART and MARCH and continuing with UKPMS he has knowledge of all of the UK's visual and machine structural assessment techniques.

ROUTINE MAINTENANCE

He also has an extensive background in Routine Highway Maintenance having worked with the Highways Agency to develop the RMMS data collection system used throughout the UK. He has developed several popular management systems for motorway, trunk and local roads including RHMIS, T-Road and Roadster. The current system, GeoMaintenance Manager, is fully

map-enabled and contains modules for Network Referencing, Inventory, Safety and Service Inspections, Defect Management and Works Ordering.

The system produces many useful reports including Asset Valuation, Performance Indicators and Audits, all of which can be tailored to suit an individual client's requirements.

DATA COLLECTION

JRCS Ltd has produced data collection for many applications and has solutions for both map and text based requirements. The current recommended platforms are the Panasonic Toughbook and the TDS Nomad depending on which data collection technique is chosen. Versions of the software are available for Inventory, Safety Inspections, Service Inspections, Condition Surveys, Lighting Surveys and Lamp Scouting. Options for location by GPS and the inclusion of an integrated photograph are available and a Sign Finder (Diagram Number look-up) Utility is also built in

where appropriate. All data files output can be formatted to suit existing systems or other databases and spreadsheets.

TRAINING & ACCREDITATION

In today's litigious Society with its inherent Claims Culture, it is important to operate a full and complete Highway Inspection process. A key element is the ability and competence of the Inspector who must be competent for the task, have sufficient experience to assess the risk posed by a defect and have been fully trained for the job. JRCS Ltd offers a formal assessment and accreditation regime for Inspectors which allows their performance to be monitored and documentation kept, thereby assisting in the defence of potential claims.

- System reviews, Codes of Practice and Manuals.
- Specification, selection and configuration of existing Management Systems.
- Data collection software for Inventory, Inspections, Condition Surveys and Lighting.
- Full and partial Highway Asset Surveys.
- Map-enabled Routine Maintenance Management Systems.
- Training in any aspect of Asset Management and accreditation of Highway Safety Inspectors.
